(54) Title: THE CYTOPLASMIC INHIBITION OF GENE EXPRESSION

(57) Abstract

One aspect of the invention is to provide novel genetic constructions for the expression of inhibitory RNA in the cytoplasm of eukaryotic cells. The inhibitory RNA may be an anti-sense RNA or a co-suppressor RNA. The genetic constructions of the invention are capable of replicating in the cytoplasm of a eukaryotic cell and comprise a promoter region in functional combination with an encoding polynucleotide. The genetic constructions may be designed so as to replicate in the cytoplasm of plant cells, yeast cells, and mammalian cells. When the eukaryotic cell of interest is a plant cell, the genetic construction is preferably derived from a plant RNA virus. Plant RNA virus derived genetic constructions may employ a plant virus subgenomic promoter, including subgenomic promoters from tobamoviruses in functional combination with the RNA encoding region. Another aspect of the invention is to provide cells comprising the genetic constructions of the invention and organism comprising a plurality of such cells. Another aspect of the invention is to provide methods of reducing the expression of a gene of interest in eukaryotic cells, i.e., methods of producing eukaryotic cells exhibiting reduced levels of expression of a gene of interest. The methods of the invention comprise the step of transfecting a cell with a genetic construction of the invention in which the RNA encoding region is specific for the gene of interest. Another aspect of the invention is to provide plant cells that produce elevated levels of the carotenoid phytoene. The elevated levels of phytoene are achieved by inhibiting the expression at the enzyme phytoene desaturase using the vectors of the invention.

AMENDED CLAIMS

[received by the International Bureau on 29 February 1996 (29.02.96);
original claims 1-38 replaced by amended claims 1-44 (4 pages)]

desaturase is arranged in the antisense direction in relation to the promoter region which is in functional combination with the phytoene desaturase.

- 5 10. A vector according to Claim 8 wherein the target gene inhibitor RNA encoding polynucleotide is a phytoene synthase, wherein the phytoene synthase is arranged in the antisense direction in relation to the promoter region which is in functional combination with the phytoene synthase.
- 10 11. A method of producing a eukaryotic cell having reduced expression of a gene of interest, the method comprising the steps of transfecting a cell with a genetic vector according to Claim 1, wherein the anti-sense RNA encoded by the anti-sense RNA encoding polynucleotide is specific for the gene of
- 15 interest.
12. A method according to Claim 11, wherein the eukaryotic cell is selected from the group consisting of plant cells, yeast cells, and mammalian cells.
- 20 13. A method according to Claim 12, wherein the eukaryotic cell is a plant cell.
- 25 14. A method according to Claim 13, wherein the vector is derived from a plant RNA virus.
15. A method according to Claim 14, wherein the vector is derived from a single stranded RNA plant virus.
- 30 16. A method according to Claim 15, wherein the promoter is a plant viral RNA subgenomic promoter.
- 35

17. A method according to Claim 15, further comprising a second subgenomic promoter operably linked to a viral coat protein encoding polynucleotide.

5

18. A method according to Claim 15, wherein at least one of the subgenomic promoters is derived from a tobamovirus.

10

19. A method of producing a eukaryotic cell having reduced expression of a gene of interest, the method comprising the steps of transfecting a cell with a genetic vector according to Claim 9, and then growing the transfected cell under conditions suitable for growth of the vector.

15

20. A method of producing a eukaryotic cell having reduced expression of a gene of interest, the method comprising the steps of transfecting a cell with a genetic vector according to Claim 10, and then growing the transfected cell under conditions suitable for growth of the vector.

20

21. A eukaryotic cell produced by the method of Claim 11.

25

22. A eukaryotic cell according to Claim 21, wherein the eukaryotic cell is selected from the group consisting of plant cells, yeast cells, and mammalian cells.

30

23. A eukaryotic cell according to Claim 22, wherein the eukaryotic cell is a plant cell.

35

24. A eukaryotic cell according to Claim 23, wherein the vector is derived from a plant RNA virus.

25. A eukaryotic cell according to Claim 24, wherein the vector is derived from a single stranded RNA plant virus.
- 5 26. A eukaryotic cell according to Claim 24, wherein the promoter is a plant viral RNA subgenomic promoter.
27. A eukaryotic cell according to Claim 24, further comprising a second subgenomic promoter operably linked to a viral coat protein encoding polynucleotide.
- 10 28. A eukaryotic cell according to Claim 24, wherein at least one of the subgenomic promoters is derived from a tobamovirus.
- 15 29. A plant comprising a plurality of cells according to Claim 23.
30. A plant according to Claim 29, wherein the vector is derived from a plant RNA virus.
- 20 31. A plant according to Claim 30, wherein the vector is derived from a single stranded RNA plant virus.
- 25 32. A plant according to Claim 31, wherein the promoter is a plant viral RNA subgenomic promoter.
33. A plant according to Claim 31, further comprising a second subgenomic promoter operably linked to a viral coat protein encoding polynucleotide.
- 30 34. A plant according to Claim 31, wherein at least one of the subgenomic promoters is derived from a tobamovirus.
- 35

35. A eukaryotic cell comprising a vector according to Claim 1.
36. A eukaryotic cell according to Claim 35, wherein the eukaryotic cell is
5 selected from the group consisting of plant cells, yeast cells, and mammalian cells.
37. A eukaryotic cell according to Claim 36, wherein the eukaryotic cell is a
10 plant cell.
38. A eukaryotic cell according to Claim 37, wherein the vector is derived from a plant RNA virus.
39. A eukaryotic cell according to Claim 38, wherein the vector is derived
15 from a single stranded RNA plant virus.
40. A eukaryotic cell according to Claim 39, wherein the promoter is a plant
20 viral RNA subgenomic promoter.
41. A eukaryotic cell according to Claim 39, further comprising a second
25 subgenomic promoter operably linked to a viral coat protein encoding polynucleotide.
42. A eukaryotic cell according to Claim 39, wherein at least one of the subgenomic promoters is derived from a tobamovirus.
43. A eukaryotic cell according to Claim 37 comprising a vector according
30 to claim 9.
44. A method according to Claim 37 comprising a vector according to
35 claim 10.
